

 ***MoveIt*** **Pro**

**Accelerating Unstructured Robotics**

**Joe Schornak**  
**Senior Robotics Engineer**

# > MoveIt

## What's new in open-source?

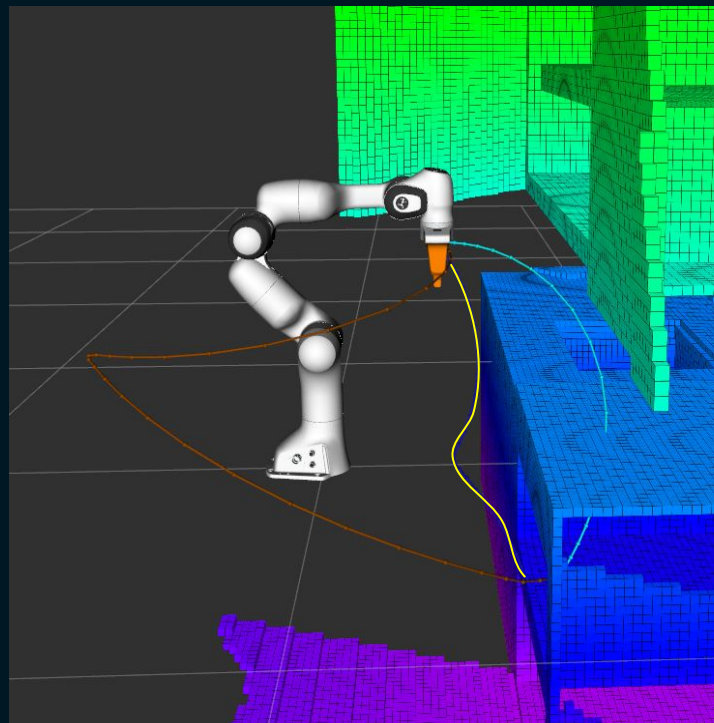

- Release for ROS 2 Iron
- New parallel planning pipeline
- Reimplementation of STOMP
- Python bindings for MoveIt C++ API
- Major revisions to MoveIt Servo
- Integration with Nvidia Isaac
- Numerous bugfixes!

# MoveIt

## Parallel Planning

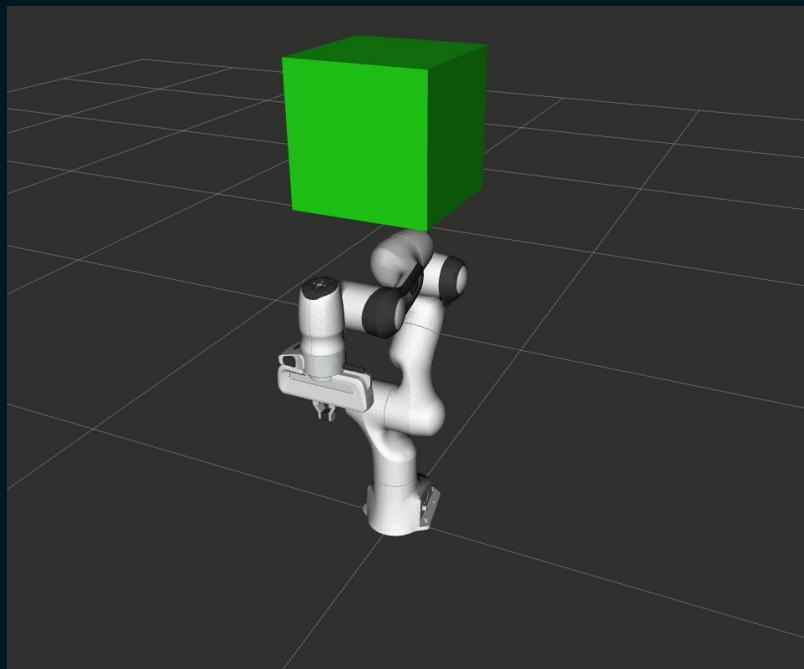

- Create solutions using several different planners, then pick the best one.
  - Can pair fast-but-naive joint interpolation with costly-but-thorough OMPL planners.
- Set criteria for “best” solution.
- Set termination criteria.

# *MoveIt*

## STOMP

- Stochastic Trajectory Optimization for Motion Planning
- Given an initial guess, optimize for a smooth collision-free path.
- Can use various cost terms to influence the optimization.

# *MoveIt* **Pro**

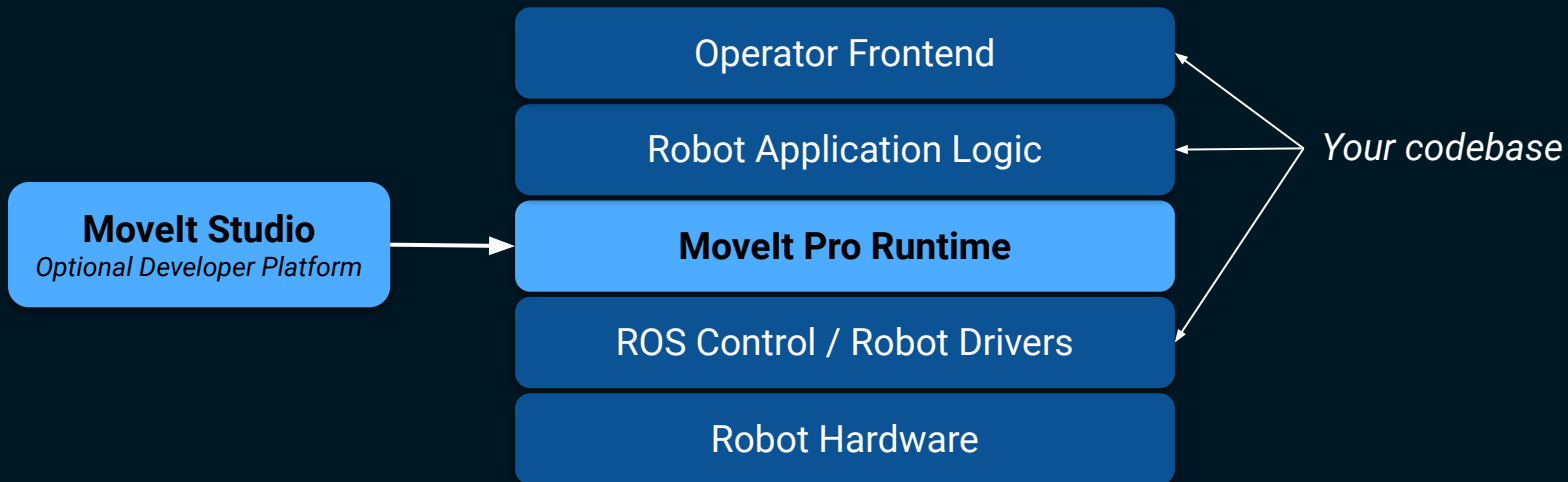

## Runtime & Developer Platform

Rapid development of advanced arm control applications for high reliability, commercial-grade implementations.

**Product Walkthrough**

# ➤ **Movelt Pro**

## Two Primary Components

# Key Features of the MoveIt Pro Runtime

## Drop-in **Motion Control** Capabilities

- Motion planning
- Task planning
- Kinematics
- Collision checking
- Visual servoing
- Singularity-free Cartesian planning
- Constraint-based planning
- Basic waypoint following

## Drop-in **Perception** Capabilities

- ML object recognition
- Point cloud processing
- 3D mesh registration
- Classical computer vision
- AR tag tracking
- Hand-to-eye calibration

## Drop-in **Force Sensitive Motions**

- Force-guarded motions
- Admittance-controlled motions

## Drop-in **Grasping** Capabilities

- Two-finger grasping
- Vacuum grasping

## **Infrastructure**

- State management with behavior trees
- Error recovery and fault tolerance
- Enhanced data logging & reporting
- Docker containers for reproducible developer and robot deployment
- Regular security patches, maintenance, and reliability testing

## Motion Planning

- InitializeMotionConstraints
- CallTriggerService
- AddSubframeToObject
- MoveGripperAction
- TransformPose
- TransformPoseFrame
- TransformPoseFromYaml
- AppendOrientationConstraint
- MoveToWaypoint
- FollowJointTrajectory
- ForceExceedsThreshold
- LoadJointTrajectoryFromYaml
- ReadTextFileAsString
- GetMoveAlongArcSubframes
- AveragePoseStamped
- ActivateControllers
- AddPointCloudToVector
- AddPoseStampedToVector
- AlwaysSuccess
- AlwaysFailure
- CalculatePoseOffset
- CreateStampedPose
- GenerateObjectsInBox
- ExecuteFollowJointTrajectory
- GetLatestTransform
- PlanCartesianPath
- UpdateAdmittanceController
- ValidateTrajectory
- PoseStreamFilter
- ReadTextFileAsString
- SaveJointTrajectoryToYaml
- SavePoseStampedToYaml
- SavePoseToYaml
- Script
- GetClipboard
- CopyToClipboard

## Task Planning

- InitializeMTCTask
- PlanMTCTask
- PushToSolutionQueue
- ExecuteMTCTask
- SetupMTCCurrentState
- SetupMTCApproachObject
- SetupMTCAttachObject
- SetupMTCCartesianMoveToJointState
- SetupMTCCartesianSequence
- SetupMTCDetachObject
- SetupMTCFixedJointState
- SetupMTCFromSolution
- SetupMTCMoveToJointState
- SetupMTCMoveToNamedState
- SetupMTCMoveToPose
- SetupMTCInterpolateToJointState
- SetupMTCUpdateGroupCollisionRule
- SetupMTCUpdateObjectCollisionRule
- SetupMTCMoveAlongFrameAxis
- SetupMTCPickObject

## Vision & Perception

- CheckCuboidSimilarity
- ClearSnapshot
- CropPointsInBox
- DetectAprilTags
- DetectObjects
- FindMaskedObjects
- FindSingularCuboids
- GetButtonFromDetections
- GetCameraInfo
- GetDetectionPose
- GetDoorHandle
- GetImage
- GetMasks2dAction
- GetMasks3dFromMasks2D
- GetPointCloud
- GetPointCloudFromMasks
- GetPointCloudFromMasks2D
- GetPointCloudFromMasks3D
- GetSynchronizedCameraTopics
- LoadImageFromFile
- PublishPointCloud
- SaveImageToFile
- SavePointCloudToYaml
- TransformPointCloud
- TransformPointCloudFrame
- CreatePoseAction
- GetClosestObjectToPose
- IsConstraintSatisfied
- KnowPointCloud

## Grasping

- CreateGraspableObject
- ExtractGraspableObjectPose
- GetGraspAndTwistSubframes
- GetGraspAndTwistSubframes
- SetupMTCApproachGrasp
- SetupMTCGenerateCuboidGrasps
- SetupMTCGenerateVacuumGrasps
- SetupMTCRetractFromGrasp
- SetupGraspThenMoveAlongArcPull
- SetupGraspTwistMoveAlongArcPush
- GetGraspableObjectFromMasks3D

## User Input

- EditWaypoint
- GetIntFromUser
- GetMoveAlongSubframes
- GetPoseFromUser
- GetStringFromUser
- IsUserAvailable
- LoadPoseStampedFromYaml
- LoadPoseStampedVectorFromYaml
- LogMessage
- DoTeleoperateAction
- IsUserAvailable
- RetrieveJointStateParameter
- RetrievePoseParameter
- RetrieveWaypoint
- SaveCurrentState
- TeleoperateJointJog
- TeleoperateTwist
- WaitForDuration
- WaitForUserTrajectoryApproval

Over 150 pre-built skills and behaviors!

(and a developer API for adding your own!)

# Reference Applications

## **Example templates that:**

- Provide adaptable code and architecture patterns

- Speed up building custom robotics applications

- Facilitate training and onboarding

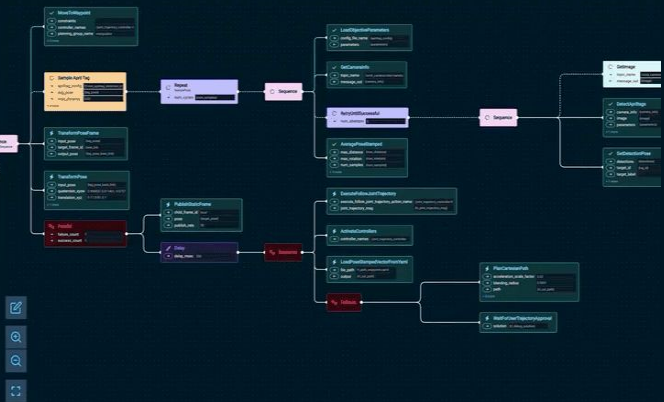

**Underconstrained Cartesian Control**  
Advanced tool path following for e.g. welding, cutting, deburring, and sanding
